**MASTER Generative AI**

# COURSE OVERVIEW

This mentor-led Generative AI Training Program – Live by GeeksforGeeks enables you to build production-ready LLM applications through hands-on mastery of Deep Learning, Transformers, Hugging Face, LangChain, RAG pipelines, vector databases, and Agentic AI systems.

You will Design, Build, and Deploy real-world Gen AI solutions while mastering the LLM lifecycle, efficient model customization, and autonomous multi-agent systems.

From the start of your course, receive 6 months of dedicated doubt support and 1-year access to all batch recordings for continuous learning and revision.

Data Learning Transformation

Transformers & LLM Architectures

Embeddings, Vector Databases  
& RAG

LangChain Workflows &  
AI Applications

Agentic AI & Multi-Agent Systems

Deployment, Guardrails  
& Evaluation

# SESSIONS SCHEDULE

- Python & Deep Learning Foundations
- Neural Networks, CNNs & RNNs
- Transformers & Large Language Models
- Hugging Face & Prompt Engineering
- Embeddings, Vector Databases & RAG
- LangChain Workflows & AI Applications
- LLM Fine-Tuning (QLoRA & PEFT)
- Agentic AI & Multi-Agent Systems
- AI Deployment, Guardrails & Capstone Showcase

**VIEW DETAILED SYLLABUS**

# PROJECTS

- Neural Network Digit Classifier
- Hugging Face Multi-Task NLP Pipeline Suite
- Semantic Search Engine with Vector Database
- RAG-Powered Private Knowledge Chatbot
- QLoRA Fine-Tuned Domain LLM
- Multimodal Text-Image Intelligence App
- Creative AI Content Studio
- Autonomous Market Research Agent (CrewAI)
- Responsible AI Evaluation & Guardrails Framework
- AI Capstone: End-to-End Production Gen AI System

# COURSE BENEFITS

Live Interaction  
with Mentor

1-year access to  
Premium Recorded  
lectures and Notes

24×7 Doubt support  
by AI Agent

Limited batch size

Teaching Assistant  
Support

Resume/LinkedIn  
Optimization and  
Mock Interviews.

Quizzes &  
Assessments

# CERTIFICATE

## Live Program (Online – Generative AI)

Training Certificate:  
GeeksforGeeks Generative AI Training Program – Live  
(Given upon successful completion of all live sessions  
and assigned projects.)

# Doubt Support & Mentorship

## Live (Online) Program

- Weekly live doubt-solving support
- AI doubt support 24×7 for instant help
- Online doubt classes every Tuesday & Thursday
- Limited batch size

# REVIEWS

**Shamita Gupta**

I can't express how much I've gained from this course. The mentors are top-notch, and the course content is comprehensive. They break down complex concepts into easy-to-understand modules, making it accessible for beginners like me.

**Vatsal Kumar**

This course is a game-changer! The skills I acquired here have already opened up new career opportunities for me. The mentors go above and beyond to prepare you for real-world scenarios!

**Sarah**

I can't believe how much I've learned in this course. It covers everything from the basics to advanced analytics, and the progression is smooth. The practical exercises and projects are what sets this course apart.

**Aniket Kokate**

Nice and informative Clear explanations and helpful guidance throughout!

# QUESTION & ANSWER

What is Generative AI?

Generative AI refers to AI systems that can create new content such as text, images, code, or audio using models like Transformers and Large Language Models (LLMs).

Who should take this Generative AI course?

Students, developers, data professionals, and AI enthusiasts who want to build real-world LLM applications, RAG systems, and autonomous AI agents.

Do I need prior AI or Machine Learning experience?

Basic programming knowledge in Python is recommended. The course starts with deep learning foundations before moving to advanced Gen AI topics.

Will I work on real-world AI projects?

Yes. You will build RAG-based chatbots, multi-agent systems, LLM-powered applications, diffusion models, and a full production-ready capstone project.

Does this course cover Transformers and LLMs in depth?

Yes. You will understand self-attention, encoder-decoder architecture, embeddings, and the complete LLM lifecycle.

Will I learn how to fine-tune large language models?

Yes. The course covers QLoRA, PEFT, and parameter-efficient fine-tuning techniques for customizing LLMs.

What is RAG and will it be covered?

Retrieval-Augmented Generation (RAG) combines LLMs with external data sources. You will build production-ready RAG pipelines using embeddings and vector databases.

Does the course include LangChain and Hugging Face?

Yes. You will build AI workflows using LangChain and deploy models using the Hugging Face ecosystem.

Will I learn how to deploy AI applications?

Yes. You will deploy AI APIs using FastAPI, Docker, local LLMs, and build interfaces with Streamlit and Gradio.

Does the program cover Agentic AI and multi-agent systems?

Yes. You will design autonomous AI systems using frameworks like CrewAI and orchestrate multi-agent workflows.

Is Responsible AI covered in the program?

Yes. The course includes guardrails, safety mechanisms, hallucination checks, and evaluation strategies for production AI systems.

What job roles can I apply for after this course?

You can apply for Generative AI Engineer, LLM Application Developer, AI Solutions Engineer, Machine Learning Engineer (Entry-Level), and AI Automation Developer roles.

Will this course help in AI-focused interviews?

Yes. The curriculum prepares you for practical AI application design, LLM system discussions, and real-world deployment scenarios.

What makes this program different from regular AI courses?

This program focuses on building and deploying production-grade Gen AI systems, not just theory or model training.

What is the final outcome of the program?

You will design, build, evaluate, and deploy a complete end-to-end Generative AI system as your capstone showcase.
